EDUCATION

University of Texas at Dallas

Bachelor of Science in Actuarial Science

Expected Graduation: May 2028

ORGANIZATIONAL EXPERIENCE

EpiTrack - Lead Developer

Sep. 2025 - Dec. 2025

Artificial Intelligence & Machine Learning Developers (AIMD), University of Texas at Dallas | Python, pandas, NumPy, statsmodels, Streamlit, PyDeck, FastAPI, PostgreSQL

- Selected by the project lead to serve as Lead Developer; designed and delivered the forecasting and analytics subsystem and integrated the feature into the shared repository.
- Engineered a disease-news time-series pipeline with regex extraction, daily aggregation, Holt-Winters forecasting, and a seven-day moving-average fallback across 7-, 14-, 30-, and 60-day horizons.
- Built Streamlit, Matplotlib, and PyDeck views for forecast bands, country filters, hotzones, and geospatial heatmaps; connected PostgreSQL and CSV inputs through stable output contracts.

PROJECT EXPERIENCE

FocusLock DNS Guard

Swift/SwiftUI macOS app, privileged helper, Chrome Manifest V3, Native Messaging

- Built a native macOS focus system with privileged background enforcement, resilient policy persistence, and reliable coordination across overlapping schedules and system interruptions.
- Integrated the macOS app with a Chrome MV3 extension through Native Messaging; developed setup and recovery diagnostics, privacy documentation, and a 1,003-test XCTest suite with 0 failures.

Evrana

React, FastAPI, PostgreSQL, OpenAI API, SwiftUI iOS

- Built a cross-platform AI reflection product that combines conversational workflows, journaling, persistent recall, progress insights, and native SwiftUI experiences across web and iOS.
- Implemented Google and JWT authentication, iOS Keychain token storage, backend domain services, SQL migrations, and regression tests for privacy isolation, protected routes, malicious input, and rate limiting.

MacAppTimeGuard

Swift/SwiftUI/AppKit macOS menu-bar app, NSWorkspace, Core Location, UserNotifications

- Built a native macOS menu-bar app that monitors running applications and enforces daily limits, schedules, Pomodoro sessions, temporary blocks, and restricted time windows.
- Added location-aware workflows and lifecycle recovery so protections remain reliable across travel, sleep, relaunches, and ordinary macOS interruptions.

Personal Keyword Blocker

OpenAI Build Week Submission | Published Chrome Manifest V3 extension, JavaScript, Chrome APIs

- Published a privacy-first Chrome extension that recorded 186 installs from May 11-Aug. 2, 2026, including 61 installs in the latest reporting period, up 5.17% from the previous period.
- Built local filtering across browsing and search with trusted website exceptions, protected settings, reliable sync/local persistence, and import/export without sending browsing activity to a remote service.

Browser Manager

Published Chrome Manifest V3 extension, JavaScript, Declarative Net Request, geolocation

- Built a direct-access browser workflow that lets users open saved websites while limiting distracting search routes.
- Added privacy-conscious location-aware controls, automatic recovery across browser lifecycle changes, and validated rollback-safe local settings.

Discipline Feed Guard

Published Chrome Manifest V3 extension, JavaScript, Reddit, YouTube, Google Search, LinkedIn

- Built local-only controls that remove distracting feeds and navigation across major platforms while preserving useful channels and communities through configurable allowlists.
- Added route-aware behavior, reliable settings migrations, import/export, and protected locked configurations without collecting or transmitting browsing history.

ADDITIONAL INFORMATION

Languages: Swift, TypeScript, JavaScript, Python, SQL, HTML/CSS

Frameworks: SwiftUI, AppKit, React, FastAPI, Streamlit, pandas, NumPy, statsmodels, PyDeck

Systems/APIs: macOS systems APIs, Chrome MV3, DNR, Native Messaging, Core Location, PostgreSQL, Supabase, OpenAI API, REST APIs

Security/Privacy: JWT/OAuth, Keychain, protected API routes, user isolation, rate limiting, privacy-conscious data handling

Quantitative: Probability, Linear Algebra, Multivariable Calculus, Advanced Calculus, Time-Series Forecasting, Statistical Modeling, Data Analysis

Testing/Tools: XCTest, pytest, Xcode, Git, Pydantic, Vite
