EDUCATION

University of Texas at Dallas *Expected May 2028*
Bachelor of Science in Actuarial Science

ACTIVITIES & LEADERSHIP

EpiTrack Sep. 2025 - Dec. 2025
Lead Developer
Artificial Intelligence & Machine Learning Developers (AIMD), University of Texas at Dallas | Python, pandas, NumPy, statsmodels, Streamlit, PyDeck, FastAPI, PostgreSQL
- Selected by the project lead to serve as Lead Developer; designed and delivered the forecasting and analytics subsystem and integrated it into the shared repository.
- Engineered a disease-news time-series pipeline with regex extraction, daily aggregation, Holt-Winters forecasting, and a seven-day moving-average fallback across 7-, 14-, 30-, and 60-day horizons; built Streamlit, Matplotlib, and PyDeck views backed by PostgreSQL/CSV inputs.

WORK EXPERIENCE

Founder & Software Engineer | Independent Software Company 2026 - Present
- Founded an independent software venture developing native macOS applications, full-stack AI products, and published Chrome extensions; led architecture, implementation, testing, and releases.

PROJECTS

FocusLock DNS Guard
Swift/SwiftUI macOS app, Chrome Manifest V3, Native Messaging
- Built a native macOS focus system with privileged background enforcement, resilient policy persistence, and reliable coordination across overlapping schedules and system interruptions.
- Integrated the macOS app with a Chrome MV3 extension through Native Messaging; developed setup and recovery diagnostics, privacy documentation, and a 1,101-test XCTest suite with 0 failures.

Evrana
React, FastAPI, PostgreSQL, OpenAI API, SwiftUI iOS
- Built a cross-platform AI reflection product combining conversational workflows, journaling, persistent recall, progress insights, and native SwiftUI experiences across web and iOS.
- Implemented Google and JWT authentication, iOS Keychain token storage, backend domain services, SQL migrations, and regression tests for privacy isolation, protected routes, malicious input, and rate limiting.

College AI
Public GitHub Project | Next.js, React, TypeScript, FastAPI, PostgreSQL, Supabase Auth
- Built a full-stack AI study platform connecting class-scoped notes, practice, tutoring, mastery, analytics, and exam planning through persistent user-scoped workflows.
- Engineered source-grounded exam preparation with embedding retrieval, deterministic validation around model output, and background extraction; added 58 deterministic backend tests for core backend workflows.

MacAppTimeGuard
Swift/SwiftUI/AppKit macOS menu-bar app, NSWorkspace, Core Location, UserNotifications
- Built a native macOS menu-bar app with daily limits, schedules, Pomodoro sessions, temporary restrictions, location-aware workflows, lifecycle recovery, and protected configuration for reliable behavior across travel, sleep, and relaunches.
- Built and maintained a 21-suite automated regression system with 2,949 passing assertions covering lifecycle behavior, location-aware workflows, protected configuration, and edge cases; verified production changes through clean Xcode builds.

Personal Keyword Blocker
OpenAI Build Week Submission | Published Chrome Manifest V3 extension, JavaScript, Chrome APIs
- Published a privacy-first Chrome extension that reached 219 installs with adoption across 8 countries, combining local browsing/search filtering, trusted website exceptions, protected settings, reliable sync/local persistence, and import/export without sending browsing activity to a remote service.

Browser Manager
Published Chrome Manifest V3 extension, JavaScript, Declarative Net Request, geolocation
- Built a direct-access browser workflow with saved-site access, search-route limits, privacy-conscious location controls, automatic lifecycle recovery, and rollback-safe local settings.

Discipline Feed Guard
Published Chrome Manifest V3 extension, JavaScript, Reddit, YouTube, Google Search, LinkedIn
- Published a local-only Chrome extension that reached 111 installs, reducing distracting feeds and navigation while preserving useful channels and communities through configurable allowlists, route-aware behavior, and protected locked settings.

SKILLS

Languages: Swift, TypeScript, JavaScript, Python, SQL, HTML/CSS
Frameworks/Libraries: SwiftUI, AppKit, React, Next.js, FastAPI, SQLAlchemy, Streamlit, pandas, NumPy, statsmodels, PyDeck
Systems/APIs: macOS system APIs, Chrome MV3, DNR, Native Messaging, Core Location, PostgreSQL, Supabase, OpenAI API, REST APIs
Security/Privacy: JWT/OAuth, Keychain, protected API routes, user isolation, rate limiting, privacy-conscious data handling
Quantitative: Probability, Linear Algebra, Multivariable Calculus, Advanced Calculus, Time-Series Forecasting, Statistical Modeling, Data Analysis
Testing/Tools: XCTest, pytest, Xcode, Git, Pydantic, Vite
