Frisco, TX | 469-536-2971 | shauryadas2006@gmail.com | [linkedin.com/in/shauryadas](https://www.linkedin.com/in/shauryadas) | github.com/ShauryaDas924

AI-focused software engineer building full-stack products across React/Next.js, FastAPI, PostgreSQL, OpenAI workflows, and SwiftUI iOS. Experienced turning LLM output into persistence-backed recall, tutoring, exam prep, authentication, and structured data systems.

EDUCATION

University of Texas at Dallas - B.S. Actuarial Science, Expected May 2028 | GPA: 3.24/4.00

TECHNICAL SKILLS

Languages: Python, TypeScript, JavaScript, Swift, SQL, HTML/CSS

AI/Backend: FastAPI, OpenAI API, Pydantic, PostgreSQL, async SQLAlchemy, pgvector, psycopg2, JWT/OAuth

Frontend: React, Next.js, Tailwind, Vite, TanStack Query, Zustand, Chart.js

Mobile/Systems: SwiftUI, iOS Keychain, Supabase, REST APIs, Git

Testing/Tools: pytest, XCTest, Xcode

FEATURED PRODUCTS

College AI - *Next.js, TypeScript, FastAPI, async SQLAlchemy, PostgreSQL, pgvector, OpenAI API*

- Built a class-scoped AI study platform that turns notes, homework, attempts, and uploaded exam materials into concept extraction, tutoring, adaptive practice, mastery tracking, flashcards, analytics, and exam prep.
- Engineered evidence-grounded Exam Lockdown workflows that link LLM-generated topic plans to persisted extracted question IDs, reducing hallucinated references while preserving source-aware recommendations and tutoring.

Evrana - *React web, FastAPI, PostgreSQL, OpenAI API, SwiftUI iOS*

- Built a cross-platform AI reflection product with mode-aware chat, journaling, golden moments, trigger recall, growth analytics, purpose tools, staged recall loading, SQL migrations, and native SwiftUI screens.
- Implemented JWT/Google auth, iOS Keychain token storage, backend domain services, and regression tests for trigger precision, cross-user privacy isolation, protected routes, malicious input, and rate limiting.

FocusLock DNS Guard - *Swift/SwiftUI macOS app, privileged helper, LaunchDaemon, Chrome MV3*

- Designed a local-first macOS enforcement system with privileged helper architecture, Browser Mode extension/native bridge integration, setup diagnostics, privacy docs, and a 604-test XCTest suite with 0 failures.

Personal Keyword Blocker - *Published Chrome Manifest V3 extension, JavaScript, Chrome APIs*

- Shipped local-only browser enforcement across URLs, titles, forms, typed input, and search queries; engineered boundary-safe regex generation, separator/accent/leet variants, trusted URL exceptions, and sync/local fallback.

MacAppTimeGuard - *Swift/SwiftUI/AppKit macOS menu-bar app*

- Built a persistent local app-control rule engine for daily limits, schedules, Pomodoro-only access, temporary blocks, blocked windows, app monitoring, and admin-protected policy changes.

Apple Lockdown Kit Website - *React/Vite, custom responsive CSS*

- Built a responsive product and buyer-support site with reusable content arrays, thank-you/update flows, privacy-focused messaging, honest limitation copy, and production build verification.

AI PRODUCT ENGINEERING STRENGTHS

- Builds AI products end-to-end by connecting prompts and LLM workflows to databases, auth, tests, typed APIs, dashboards, and user-facing UX instead of isolated demos.
- Designs AI features with persistence-backed state, privacy-conscious boundaries, source grounding, fallback states, and product-quality onboarding.
