Software engineer and product builder focused on cross-platform productivity, AI, and macOS applications. Built multiple end-to-end private products spanning Swift/SwiftUI, React/Next.js, FastAPI, PostgreSQL, Chrome MV3, iOS, and OpenAI-powered workflows.

EDUCATION

University of Texas at Dallas - B.S. Actuarial Science, Expected May 2028 | GPA: 3.24/4.00

TECHNICAL SKILLS

Languages: Swift, TypeScript, JavaScript, Python, SQL, HTML/CSS

Frameworks: SwiftUI, AppKit, React, Next.js, FastAPI, Tailwind, Vite

Systems/APIs: macOS LaunchDaemons/LaunchAgents, Chrome MV3, Native Messaging, JWT/OAuth, PostgreSQL, Supabase, OpenAI API, Git

Testing/Tools: XCTest, pytest, Xcode, REST APIs

FEATURED PRODUCTS

FocusLock DNS Guard - *Swift/SwiftUI macOS app, privileged helper, LaunchDaemon, Chrome MV3*

- Designed a privileged macOS enforcement architecture using LaunchDaemons, immutable active lock records, tombstones, atomic hosts-file updates, DNS cache flushing, and overlap-safe schedule rebuilding.
- Built browser-scoped allow-list mode with a Chromium MV3 extension and Swift native messaging bridge; added helper repair checks, setup diagnostics, privacy docs, and a 604-test XCTest suite with 0 failures.

Evrana - *React web, FastAPI, PostgreSQL, OpenAI API, SwiftUI iOS*

- Built a cross-platform AI reflection product with chat, journaling, golden moments, trigger recall, growth analytics, and purpose tools across React web, FastAPI services, SQL migrations, and native SwiftUI screens.
- Implemented JWT/Google auth, iOS Keychain token storage, backend domain services, and regression tests for trigger precision, cross-user privacy isolation, protected routes, malicious input, and rate limiting.

College AI - *Next.js, TypeScript, FastAPI, async SQLAlchemy, PostgreSQL, pgvector, OpenAI API*

- Developed a class-scoped AI study platform for notes upload, concept extraction, homework tutoring, adaptive practice, mastery tracking, flashcards, analytics, and evidence-based exam prep.
- Engineered Exam Lockdown planning that links LLM-generated topic plans to persisted extracted question IDs, reducing hallucinated references while preserving source-grounded tutoring workflows.

MacAppTimeGuard - *Swift/SwiftUI/AppKit macOS menu-bar app, NSWorkspace, UserNotifications*

- Built a local app-control rule engine that monitors running macOS apps, enforces daily limits, schedules, Pomodoro-only access, temporary blocks, and blocked windows, and protects locked policies with admin authorization and persistent local state.

Personal Keyword Blocker - *Published Chrome Manifest V3 extension, JavaScript, Chrome APIs*

- Shipped a privacy-first keyword blocker with local-only enforcement across URLs, titles, forms, typed input, search queries, and optional page text; engineered boundary-safe regex generation, separator/accent/leet variants, trusted URL exceptions, sync/local fallback, and append-only lock mode.

Apple Lockdown Kit Website - *React/Vite marketing and buyer-support site, custom responsive CSS*

- Built a responsive product and buyer-support site for a multi-layer Apple productivity kit, combining premium UX, reusable content arrays, thank-you/update flows, privacy-focused messaging, and honest limitation copy verified by production build.

PRODUCT ENGINEERING STRENGTHS

- End-to-end builder workflow: designs architecture, implements features, debugs edge cases, writes documentation, prepares store/buyer materials, and packages private projects for review without exposing secrets.
- Turns complex self-control, study, and productivity ideas into local-first, privacy-conscious software with clear onboarding, testable boundaries, and honest product limitations.
