

# SHAURYA DAS

Frisco, TX | 469-536-2971 | shauryadas2006@gmail.com | [linkedin.com/in/shauryadas](https://www.linkedin.com/in/shauryadas) | [github.com/ShauryaDas924](https://github.com/ShauryaDas924)

Software engineer focused on native Apple-platform software, macOS productivity tools, and cross-platform product engineering. Built Swift/SwiftUI and AppKit apps using privileged helpers, LaunchDaemons, menu-bar utilities, iOS Keychain auth, local persistence, and privacy-conscious UX.

## EDUCATION

**University of Texas at Dallas** - B.S. Actuarial Science, Expected May 2028 | GPA: 3.24/4.00

## TECHNICAL SKILLS

**Languages:** Swift, TypeScript, JavaScript, Python, SQL, HTML/CSS

**Apple Platforms:** SwiftUI, AppKit, Xcode, iOS 17+, Keychain, NSWorkspace, NSRunningApplication, UserNotifications

**macOS Systems:** LaunchDaemons/LaunchAgents, privileged helpers, Native Messaging, local JSON persistence, app lifecycle, setup diagnostics

**Web/Backend:** React, Next.js, FastAPI, PostgreSQL, Supabase, OpenAI API, REST APIs

**Testing/Tools:** XCTest, pytest, Git

## FEATURED PRODUCTS

**FocusLock DNS Guard** - *Swift/SwiftUI macOS app, privileged helper, LaunchDaemon, Chrome MV3*

- Designed a privileged macOS enforcement architecture using LaunchDaemons, helper install/repair checks, bundled-helper verification, immutable active lock records, atomic hosts-file updates, DNS flushing, and overlap-safe schedule rebuilding.
- Built Browser Allow List mode with a Chromium MV3 extension and Swift native messaging bridge; documented privacy boundaries and verified helper, schedule, and policy behavior with 604 XCTest tests and 0 failures.

**MacAppTimeGuard** - *Swift/SwiftUI/AppKit macOS menu-bar app, NSWorkspace, UserNotifications*

- Built a native menu-bar app with SwiftUI/AppKit, NSStatusItem, NSWorkspace, NSRunningApplication, UserNotifications, root-owned LaunchAgent support, protected config, local state, and structured logs.
- Implemented a local rule engine that enforces daily limits, schedules, Pomodoro-only access, temporary blocks, blocked windows, and admin-protected weakening policy through a simple popover plus Manage Apps editor.

**Evrana iOS / Cross-Platform Evrana** - *SwiftUI iOS, React web, FastAPI, PostgreSQL, OpenAI API*

- Built native SwiftUI iOS workflows with iOS 17+, Keychain-backed JWT storage, Google Sign-In SDK integration, typed API client layers, reusable themed components, and shared backend contracts with the React/FastAPI product.

**College AI** - *Next.js, TypeScript, FastAPI, PostgreSQL, OpenAI API*

- Developed a full-stack AI study product with typed frontend API helpers, FastAPI routers, SQL-backed class-scoped learning models, upload flows, tutoring, mastery tracking, and evidence-based exam prep.

**Personal Keyword Blocker** - *Published Chrome Manifest V3 extension, JavaScript, Chrome APIs*

- Shipped a local-only Chrome MV3 extension with service worker/content-script enforcement, sync/local storage fallback, custom matching engine, trusted URL exceptions, and append-only lock mode.

**Apple Lockdown Kit Website** - *React/Vite, custom responsive CSS*

- Built a buyer-support site for an Apple-focused productivity kit with setup-oriented UX, update flows, privacy-conscious messaging, and honest limitation copy verified by production build.

## APPLE PLATFORM ENGINEERING STRENGTHS

- Builds native Apple software beyond toy apps by combining SwiftUI/AppKit interfaces with macOS system behavior, setup diagnostics, persistence, and testable protection boundaries.
- Documents privacy/security boundaries and onboarding flows for complex native tools while preserving transparent, user-controlled behavior.
